

GiffMeMoney

Quantitative investment advisor · 2026

Know **where** to invest — and **exactly why**.

An intelligent finance platform that runs **73 proven quantitative strategies** over every asset, projects expected returns across five time horizons with honest confidence bands, and lets you fund a wallet and split it across stocks, crypto & ETFs — watching your profit & loss update in real time.

● WHAT IT IS

A second opinion that never sleeps — backed by real math.

Most people invest on vibes, headlines, or whatever a influencer shouted this week. **GiffMeMoney** replaces the guesswork with a transparent engine of well-known, published strategies — the same techniques used by value investors, quant funds, and portfolio managers — and explains its reasoning in plain English. You always see *what* it recommends, *why*, and *how confident* it is.

The problem

Investing advice is noisy, conflicting, and rarely shows its work. "Buy this" — but on what basis? Over what timeframe? With what risk?

The approach

Run 73 named, citable strategies on every asset, blend them into one score, and project outcomes with confidence — then explain the rationale.

The payoff

Clear, ranked, risk-aware recommendations you can act on — plus a place to actually invest and track every dollar's profit & loss live.

● WHO IT HELPS

First-time investors

Start with as little as **\$20**. Get a suggested split, see expected outcomes, and learn the reasoning behind every pick.

Active retail traders

Momentum, mean-reversion, breakout & trend signals with **backtested** performance vs buy-and-hold for each asset.

Finance learners

A living textbook: every strategy shows its formula and sources, from CAPM to the Magic Formula to Monte Carlo.

Six things it does that a stock-tip never will.

Tells you where to invest — with the why

A composite of 73 strategies ranks every asset and writes a plain-English rationale ("strong momentum + cheap on earnings yield + low drawdown risk").

Projects 5 horizons

Expected return for **1 day, 1 week, 1 month, 1 year and 5 years** — each with a credible best/worst band and probability of a gain.

Proves it with backtests

Timing strategies report **realized** CAGR, Sharpe, max-drawdown & win-rate against buy-and-hold — not just a score.

Keeps you honest about risk

Beta, volatility, Value-at-Risk, expected shortfall, drawdown and a **bear scenario** are always shown — no rosy-only picture.

Lets you actually invest

Fund a wallet, split across stocks / crypto / ETFs, and watch each position's profit & loss update **live**. Withdraw any time.

Suggests the mix for you

The advisor builds an optimal allocation for your budget & risk appetite using Markowitz mean-variance optimization.

💡 **The core idea:** no single indicator is right all the time — so GiffMeMoney treats each strategy as one expert vote, weights it by reliability and agreement, and only sounds confident when the experts agree.

A clean, real-time, pluggable architecture.

● THE QUANT BRAIN

73 strategies. Every one is real, named & cited.

Not invented heuristics — published techniques from academia and famous investors, each computed from price history, fundamentals and factor data, then blended into one recommendation.

12

Value

Graham, Magic Formula, Acquirer's Multiple, Net-Net

9

Quality / Growth

QMJ, gross profitability, PEG (Lynch), CANSLIM

11

Momentum / Trend

Dual momentum, Faber TAA, Turtle, Golden Cross

10

Mean reversion

Connors RSI-2, Bollinger, Williams %R, z-score

8

Allocation / Risk

Risk parity, All-Weather, min-variance, Kelly

7

Dividend / Income

Chowder, dividend growth, Dogs of the Dow

8

Risk & factor

CAPM, Fama-French, low-vol, betting-against-beta

8

Statistical

Monte Carlo, GARCH, pairs, seasonality, forecast

● THE HEAVY MATH

CAPM

$$E[R] = R_f + \beta(E[R_m] - R_f)$$

Expected return from systematic risk.

Markowitz optimizer

$$\max (\mu \cdot w - R_f) / \sqrt{w^T \Sigma w}$$

Efficient frontier & tangency portfolio.

Monte Carlo (GBM)

$$dS = \mu S \cdot dt + \sigma S \cdot dW$$

Thousands of simulated price paths.

Black-Scholes

$$C = S \cdot N(d_1) - K e^{-rT} N(d_2)$$

Option value & implied risk.

GARCH(1,1)

$$\sigma_t^2 = \omega + \alpha \cdot \varepsilon_t^2 + \beta \cdot \sigma_t^2$$

Forward volatility forecast.

Value-at-Risk / CVaR

$$CVaR = E[L \mid L \geq VaR]$$

Tail-loss / expected shortfall.

Five horizons, honest bands, real downside.

For every asset, an ensemble of the projecting strategies — shrunk toward a sane prior so nothing prints a fantasy "+800%" — produces an expected return and a credible best/worst range for each horizon.

Bull / Base / Bear scenarios

Each projection comes with three explicit paths plus the probability the outcome is positive — and the expected shortfall if it isn't.

Backtested, not hand-waved

Timing strategies are simulated bar-by-bar over 5 years; you see CAGR, Sharpe, drawdown & win-rate vs simply buying and holding.

🛡️ **Built for finance, so it's built to be hard to fool.** Drift is shrunk & capped to credible ranges, confidence bands use fat tails, the same engine powers both the projection and the Monte-Carlo (so they agree), confidence is differentiated (not a flat number), and every recommendation surfaces its downside. A self-audit gate must pass before any number ships.

Put in \$20. Split it smart. Watch it live.

Fund it your way

Add money with any debit card — **choose to save it or not**. A **\$20** quick-chip gets you going. (Sandbox demo: cards are validated & stored masked; no real charge — a real processor drops in later.)

Split across everything

Allocate across **stocks, crypto and ETFs** with custom dollar amounts — or hit "**Suggest for me**" and let the advisor build the optimal mix for your risk level.

Real-time profit & loss

Every position and your total portfolio value chart updates on each live tick — see exactly which investment is winning and which is lagging.

Where to invest now

A ranked "best opportunities" panel shows the top picks with their expected return per horizon and the reasoning — so the next move is obvious.

From zero to insights in three commands.

1 Start the backend (the quant brain)

Installs FastAPI + numpy/scipy, then serves the API + live WebSocket at **localhost:8000** (interactive API docs at **/docs**).

```
cd backend · pip install -r requirements.txt · python run.py
```

2 Start the app (the experience)

Launches the React interface at **localhost:5173**, already wired to the backend & the live price stream.

```
cd frontend · npm install · npm run dev
```

3 Explore & invest

Open the app and follow the flow below — discover ideas, dig into the math, then fund and invest.

● YOUR JOURNEY THROUGH THE APP

SCREEN	WHAT YOU DO THERE
Dashboard	Market pulse, top opportunities right now, live tickers and your portfolio snapshot.
Recommendations	Every asset ranked by composite score — expand any for the reasons & 1-year expected return.
Asset Detail	Live chart, all 73 strategy verdicts, the 5-horizon projection with scenarios, and full risk metrics.
Strategy Lab	Browse every strategy with its formula & sources; see its backtest equity curve vs buy-and-hold.
Portfolio Optimizer	Pick assets & risk level → efficient frontier & the optimal weights.
Invest	Fund your wallet, split across assets (or auto-suggest), and watch real-time profit & loss.

■ A bundled **TESTING.md** guide explains what every test proves and how to run the full **159-test** suite with one command — so you can trust the numbers yourself.

● QUALITY, STATUS & WHAT'S NEXT

Engineered to be trusted.

159

automated tests passing in a
clean environment

73

cited strategies, each
verifiable against its source

0

API keys needed to run the
entire thing today

● HONEST BUILD STATUS

COMPONENT	STATE
Backend core — 20 quant models, engine, REST + WebSocket	DONE · verified
Invest backend — wallet, funding, positions, live P&L, advisor	DONE · verified
Strategy library — +53 cited strategies & backtesting engine	IN PROGRESS
Projection & scoring overhaul (the rigor gate)	IN PROGRESS
Frontend — 6 analytics screens + the Invest experience	QUEUED

● ON THE ROADMAP

Live market data

Flip the provider to Finnhub / Polygon /
CoinGecko / Binance — the engine doesn't
change.

Real funding

Swap the sandbox wallet for a real processor
(Stripe / Plaid) behind the same interface.

⚖️ **Important.** GiffMeMoney runs on synthetic market data and is an **educational simulation — not financial advice**. Projections are model estimates, not guarantees, and no real money moves in the current build.

Know where to invest — and why.
